

shell scripting / bash scripting

----scripting--we apply no of command in script that make work easy just like automation or programming

-----here we write a script on shell . and shell will run with linux terminal so we dont need to compile it

-----but when we write a code in another language that time we have to compile it to understand that code by machine

```
-- start terminal-----back ground run a shell
```

```
---command # ps-----BASH
```

different type of shell-----BASH KSH CSH TCSH
 bourn-again shell kornshell cshell (c language) berkeley unix

-----installation of linux-----distributor
